Continuation of 3. NOTE: The new recitation "the valve element alternatively opening and closing the fluid conduit on the upstream side of the valve chamber," requires further search and/or consideration.

Continuation of 11. does NOT place the application in condition for allowance because: Regarding the argument that the prior art references of Lorenz (3,198,214) and Nozaki (3,854,468) do not properly teach a "valve element," note that a valve regulates/controls fluid flow. The valve element of Lorenz teaches "the insert element forces out of the flow chamber the part of the flow medium which on impact would have escaped through the coaxial bore." The valve element of Nozaki teaches a valve element that induces flow vortex/swirling action. Thus prior art references of Lorenz and Nozaki anticipate a valve assembly including valve elements..
